1 PROBLEM STATEMENT

 $\triangle ABC$ is an isosceles triangle in which AB = AC. Side BA is produced to D such that AD = AB. Show that $\angle BCD$ is a right angle.

2 Solution

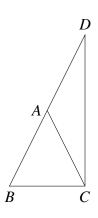

Fig. 1

We are given that AB = AC. So

$$\|\mathbf{A} - \mathbf{B}\| = \|\mathbf{A} - \mathbf{C}\|$$
 (2.0.1)

Also BA is produced to D such that AB = AD. Therefore we have

$$\mathbf{A} - \mathbf{B} = \mathbf{D} - \mathbf{A} \tag{2.0.2}$$

Let \mathbf{m}_{CB} and \mathbf{m}_{CD} be the direction vectors of **CB** and **CD** respectively. Then

$$\mathbf{m}_{CB}\mathbf{m}_{CD} = (\mathbf{B} - \mathbf{C})^{T}(\mathbf{D} - \mathbf{C})$$

$$= (\mathbf{B} - \mathbf{A} + \mathbf{A} - \mathbf{C})^{T}(\mathbf{D} - \mathbf{A} + \mathbf{A} - \mathbf{C})$$

$$= ((\mathbf{B} - \mathbf{A}) + (\mathbf{A} - \mathbf{C}))^{T}((\mathbf{D} - \mathbf{A}) + (\mathbf{A} - \mathbf{C}))$$

using (2.0.2) we get

$$\mathbf{m}_{CB}\mathbf{m}_{CD} = ((\mathbf{B} - \mathbf{A}) + (\mathbf{A} - \mathbf{C}))^{T}((\mathbf{D} - \mathbf{A}) + (\mathbf{A} - \mathbf{C}))$$

$$= ((\mathbf{B} - \mathbf{A}) + (\mathbf{A} - \mathbf{C}))^{T}((\mathbf{A} - \mathbf{B}) + (\mathbf{A} - \mathbf{C}))$$

$$= (-(\mathbf{A} - \mathbf{B}) + (\mathbf{A} - \mathbf{C}))^{T}((\mathbf{A} - \mathbf{B}) + (\mathbf{A} - \mathbf{C}))$$

$$= -\|\mathbf{A} - \mathbf{B}\|^{2} - (\mathbf{A} - \mathbf{B})^{T}(\mathbf{A} - \mathbf{C})$$

$$+ (\mathbf{A} - \mathbf{C})^{T}(\mathbf{A} - \mathbf{B}) + \|\mathbf{A} - \mathbf{C}\|^{2}$$

now $(\mathbf{A} - \mathbf{B})^T (\mathbf{A} - \mathbf{C})$ and $(\mathbf{A} - \mathbf{C})^T (\mathbf{A} - \mathbf{B})$ are both dot product of vectors $(\mathbf{A} - \mathbf{B})$ and $(\mathbf{A} - \mathbf{C})$ and so

$$\mathbf{m}_{CB}\mathbf{m}_{CD} = -\|\mathbf{A} - \mathbf{B}\|^2 - (\mathbf{A} - \mathbf{B})^T (\mathbf{A} - \mathbf{C})$$
$$+ (\mathbf{A} - \mathbf{C})^T (\mathbf{A} - \mathbf{B}) + \|\mathbf{A} - \mathbf{C}\|^2$$
$$= -\|\mathbf{A} - \mathbf{B}\|^2 + \|\mathbf{A} - \mathbf{C}\|^2$$

using (2.0.1) we get

$$\mathbf{m}_{CB}\mathbf{m}_{CD} = -\|\mathbf{A} - \mathbf{B}\|^2 + \|\mathbf{A} - \mathbf{C}\|^2 = 0$$
 (2.0.3)

since $\mathbf{m}_{CB}\mathbf{m}_{CD} = 0$, therefore BC \perp CD and $\angle BCD$ is right angle.
